

Blood Donor Paging

www.lrsaustralia.com.au

Don't Make Donors Wait To Donate

Make off-site donating faster and easier for you and your donors with LRS Pagers.

One of the most time consuming aspects of collecting blood off site is maintaining a smooth flow of donors, especially at larger locations like office buildings. But, not any more. Now your mobile units can streamline the blood donation process with LRS donor pagers.

Donor Pagers

Simply give a pager to a donor so they can return to their office, classroom, etc. Then, page them a few minutes before you're ready for them. That way, they don't forget their appointment time and it's less of a disruption to their schedules. Plus, you won't have donors crowding the bloodmobile or donation area. You can even page donors on their cell phone with our T7450 Trinity transmitter.

Benefits:

- Instantly page donors no matter where they are in the building
- Prevents falling behind schedule because of donors forgetting appointment times
- You don't have to go searching for donors
- Lets donors stay in their offices, classrooms, etc. until needed
- Eliminates disruptive overhead paging
- Prevents crowding of bloodmobile or donation area
- Improves customer service
- Collect donations faster so you can move on to the next scheduled blood drive

Features:

- Pagers flash, beep, vibrate, or glow
- Most durable and highest quality pagers on the market
- UHF FM Frequency provides better range
- Customized labels available

Donor Pagers

T7450A Transmitter

T7450A Trinity Transmitter

- Works with donor pagers and cell phones
- Allows a pre-canned voice recording for cell phone paging
- Built-in clock
- UHF frequency (420 – 470 MHz)
- Operates on 110V or 220V
- Overall size: 4" x 8"

"These pagers are fantastic for use at blood drives. By not forcing people to just sit and wait, they can continue working or walking the mall until we need them. It has improved our customer service dramatically. Our staff, coordinators and donors all love it."
